

Problem – Solution Fit

Implement Client Script & UI Policy (Incident) for NM Project
Date: 03 October 2026 | Team ID: NM-TEAM-ID

Problem

Incident agents need reliable guidance while entering and updating incidents. Without dynamic field control, records can be incomplete or inconsistent.

Solution

Configure Incident Client Scripts and UI Policies to automatically calculate priority, enforce state-specific mandatory fields, and validate the form before submission.

Problem-Solution Fit

The solution directly changes the Incident form at the point where the problem occurs: data entry and update. It reduces avoidable incomplete submissions and gives immediate feedback.

Success Indicators

Resolved incidents contain Resolution Code and Resolution Notes.

On Hold incidents contain On Hold Reason.

Priority reflects Impact and Urgency rules.

Invalid submissions are blocked with understandable messages.

Project Details

Date	Team ID	Project Name	Maximum Marks
03 October 2026	NM-TEAM-ID	Implement Client Script & UI Policy (Incident) for NM Project	2 Marks

Fit Analysis

Customer Problem	Proposed Response	Expected Benefit
Incomplete resolved incidents	Resolved-state UI Policy + submit validation	Better data completeness
Missing on-hold reason	On Hold UI Policy	Clear reason for hold status
Manual priority selection errors	Impact/Urgency onChange Client Script	Consistent priority calculation
Unclear form behavior	Dynamic UI rules and messages	Improved agent usability
