

Functional & Performance Testing – ServiceNow Incident

Implement Client Script & UI Policy (Incident) for NM Project
Date: 03 October 2026 | Team ID: NM-TEAM-ID

Scope

Although the original template was designed for GenAI, this project does not require an external AI model. The template is repurposed to test Incident client-side functionality and performance.

Functional Tests

FT-01: Change Impact → verify Priority recalculates.

FT-02: Change Urgency → verify Priority recalculates.

FT-03: Set State = Resolved → verify resolution fields become mandatory.

FT-04: Set State = On Hold → verify On Hold Reason becomes mandatory.

FT-05: Submit Resolved incident without resolution details → submission is blocked.

FT-06: Submit valid Resolved incident → submission is allowed.

Performance Tests

PT-01: Change Impact/Urgency repeatedly and verify no visible lag.

PT-02: Open Incident form and verify no script error in browser console.

PT-03: Submit valid incident and verify no unnecessary client/server delay introduced by the customization.
