

ServiceNow Validation Metrics & Test Design

Implement Client Script & UI Policy (Incident) for NM Project
Date: 03 October 2026 | Team ID: NM-TEAM-ID

Testing Objective

Validate correctness, response behavior, and maintainability of the Incident Client Scripts and UI Policies.

Metrics

Rule pass rate = $\text{passed test cases} / \text{executed test cases} \times 100$.

Submission-block accuracy = $\text{correctly blocked invalid submissions} / \text{invalid submissions tested} \times 100$.

False positive validation = valid submissions incorrectly blocked.

Client response observation = form updates occur immediately after field changes.

Target Acceptance

All critical P1 scenarios must pass. No critical defect may remain open for submission.

Test Data

Use representative Incident records covering Low/Medium/High impact, urgency combinations and New/In Progress/On Hold/Resolved states.
