

User Acceptance Testing (UAT) – ServiceNow Incident Automation

Implement Client Script & UI Policy (Incident) for NM Project
Date: 03 October 2026 | Team ID: NM-TEAM-ID

Project Overview

Project Name: Implement Client Script & UI Policy (Incident) for NM Project

Project Description: ServiceNow Incident form enhancement using Client Scripts and UI Policies.

Project Version: 1.0

Testing Period: 03 October 2026

Testing Scope

Impact/Urgency priority calculation, Resolved validation, On Hold validation, field mandatory behavior, valid/invalid submission handling.

Testing Environment

ServiceNow development/test instance; Incident table; browser-based ServiceNow UI.

Acceptance Rule

All High-priority scenarios must pass. Any failed scenario must be corrected and retested before final sign-off.

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Priority calculation 1	Set Impact=1 and Urgency=1	Priority becomes 1 – Critical according to configured matrix.	Record during execution	Pending
TC-002	Priority calculation 2	Set Impact=2 and Urgency=2	Priority becomes 3 according to configured matrix.	Record during execution	Pending
TC-003	Resolved mandatory fields	Set State=Resolved	Resolution Code and Resolution Notes become mandatory.	Record during execution	Pending
TC-004	Resolved invalid submit	Leave resolution data blank and submit	Submission is blocked and error is shown.	Record during execution	Pending
TC-005	Resolved valid submit	Enter required resolution details and submit	Incident can be submitted.	Record during execution	Pending
TC-006	On Hold validation	Set State=On Hold	On Hold Reason becomes mandatory.	Record during execution	Pending
TC-007	No regression	Create a normal New/In Progress incident	Normal incident processing remains usable.	Record during execution	Pending

Bug Tracking

Bug ID	Bug Description	Severity	Status	Retest
BG-001	To be recorded during execution	—	Open/Closed	Required if defect found
